Example Calculation

To calculate the divisor per linear foot of trench, add both sides of the sidewall absorption area (effective depth) plus the bottom absorption area (width). In the example below, the effective depth is 4' and the width is 3'. The divisor would be 11 (4 + 4 + 3). 11 is the maximum allowable divisor.

These diagrams are for example purposes only; they are not to TRUE scale.

NOTE: TANK PLUMBING SHOULD NOT BE CONNECTED TO HOUSE PRIOR TO INSPECTION
